BRONTO SKYLIFT

Safety above all

Bronto Skylift F-XR range

VERSATILITY, ERGONOMICS AND EFFECTIVE OUTREACH

BRONTO SKYLIFT
FL 45 - XR

Performance and usability above all

Bronto Skylift XR range provides versatility, effective outreach and everyday usability to all muncipal and industrial fire fighting missions.

Compact construction and ergonomic turntable control station

Even the F60XR, which represents the highest aerial ladder platforms in the world, has less than 12m transportation length. The XR-range platforms are a modern, compact fire fighting solutions that are easy to drive to the site and user-friendly to operate.

The turntable has continuous 360 degree rotation so you can smoothly use all the working radius without unnecessary stops. When you are the man in the ground controls, you have integrated joystics for boom and rescure cage movements and a Bronto+ display similar to the one in the cage. To keep up with your colleagues, there is a loudspeaker for intercom and the command radio. For added safety the emergency valves are easily reachable and the access from the decking to the ladder is safe and easy.

Fully equipped rescue cage and a stable ladder - if you need them

The rescue cage has a safe load up to 500 kg and it can be rotated ± 60° for optimal positioning and accessibility. Re-designed fold out steps provide easy access to the rescue ladder. If your specifications don't include the ladder, the platform can always be configured without them.

The water monitor is placed outside the rescue cage to free the space for rescue operations. When you need stretchers or wheel chairs, the cage is ready for easy integration of these. Same applies for other options like winches, lights and cameras.

For the operational safety and efficiency you have electricity, comrpressed air, water and breathing air supply integrated to the boom structure. Additionally, there is also a water spray curtain under the cage and integrated ultrasonic collision guards to keep you from crashing when you have a low visibility.

Bronto+ control system takes care of you

Safety is about creating a safer working environment. An advanced Bronto+ control system increases the safety on your
worksites by letting you focus on the job at hand.

- Easy and ergonomic
- Precise, stable movementsand extremely reliable outreach
- Automatic selection of the maximum allowed outreach in every direction based on the set up and cage load
- Bronto+ displays with touch screens and tailorable menus
- Integrated help texts, quick manuals and detailed failure codes help you in all situations

Key features

- Compact and lighter construction for better usability
- Space-saving, integrated water supply
- Spacious and versatile working cage with 500 kg load
- Cage rotation possible also to the ladder side
- Advanced ergonomics, accessibility and functionality
- Rescue ladders with fixed handrails on the main boom
- Transportation length less than 12 meters
- User friendly Bronto 5+control system
- Modern service tools and a wide service network

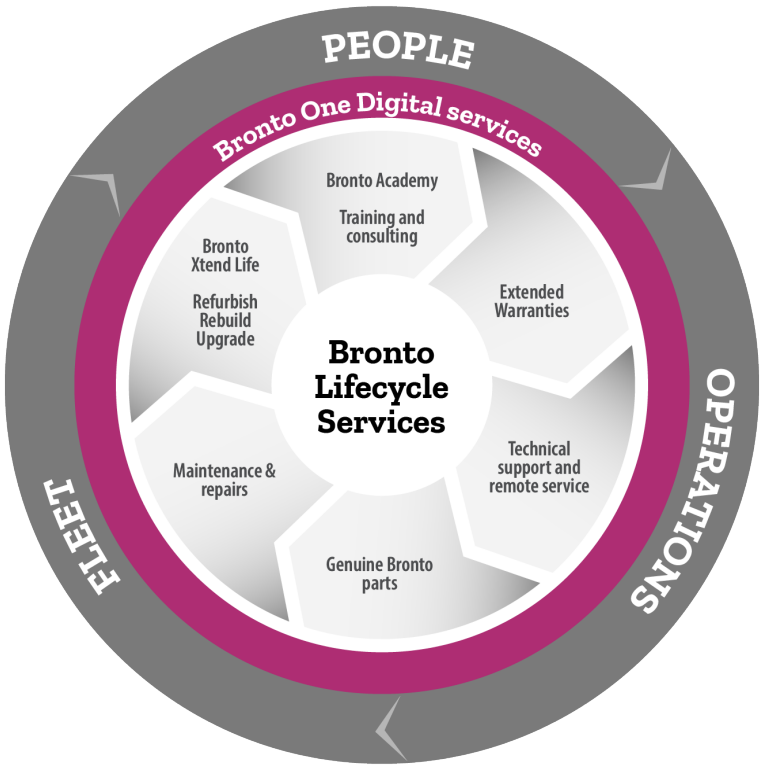
Total lifecycle support

For optimal performance and your safety, it pays off to take the best possible care of your Bronto platform.

An aerial platform is a long-term investment. Our services ensure your aerials are connected and kept in the best possible shape for their entire lifecycle. Taking advantage of these services will help you maximise the value of your investment by maximising uptime, ensuring optimal performance, maintaining resale value, and – above all – keeping your operators and personnel safe.

Lifetime support begins when your first Bronto is delivered, starting with detailed handover training for your future operators and service personnel. Throughout the lifecycle of your Bronto, you will have access to our digital services, training, technical support, remote service, extended warranties, spare parts, maintenance, repairs, refurbishments, upgrades and rebuilds.



BRONTO SKYLIFT

Safety above all

Bronto Skylift is a trusted global supplier of truck-mounted hydraulic platforms. We design, manufacture, sell and service appliances for rescue and firefighting, as well as for industrial access.

Our product range includes approximately 50 models with a range of 28 to 104 metres of working height. The advanced modularity also allows for numerous client-specific modifications. During the past 50 years, we have delivered over 8,000 platform units to fire brigades and industrial customers throughout all the continents in more than 120 countries.

Our headquarters and production plants are situated in Finland. We also have subsidiaries in Germany, Sweden, Switzerland and the US. The company is part of the Japan-based Morita Holdings Corporation.
