

# Bronto One

A man with a beard and short brown hair, wearing a dark suit and white shirt, stands with his hand on his chin in a thoughtful pose. The image is overlaid with a semi-transparent purple filter. In the background, there is a faint image of a city skyline at night with many lit-up buildings. Overlaid on the man's chest is a detailed image of a construction crane with a platform basket. The text 'Optimise uptime' and 'Minimise downtime' is written in a bold, purple font on a white background, positioned over the lower part of the man's torso.

**Optimise uptime**  
**Minimise downtime**

## Do you want to optimise uptime?

Bronto One, a new service, gives you a full visual overview of your resources, performance and abilities. You can always access the information you need, right when you need it.

If you're ready to kick off your digital journey and start getting quality insights for your business, we'll be there to help you every step of the way.

## **All your equipment data in one place**

Fleets often include many types of equipment, and having only one manufacturer's unit in your fleet management system is like trying to complete a puzzle without all the pieces.

Bronto One welcomes every manufacturer's units and equipment, so it really does provide a full picture of your fleet.

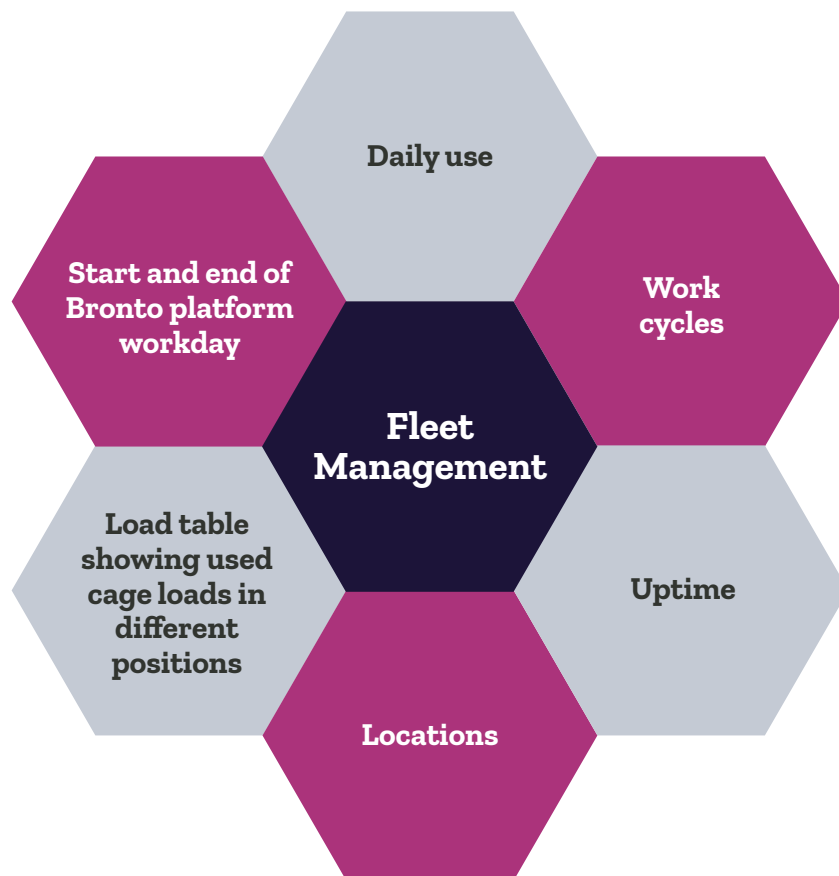

Bronto One has an open interface, so you can easily integrate it with other systems. Naturally, all Bronto aerals equipped with a modem can be connected to Bronto One.

# Operations

## Fleet management

With Bronto One, you'll understand what's going on with your equipment, where it is, and increase its availability. It includes all the essential features for fleet management. You can use it for monitoring and optimising usage and performance with a range of real-time data:

- Uptime
- Daily use, including operational hours, RPM-hours, and engine hours
- Start and end of Bronto platform workday
- Work cycles
- Load table showing used cage loads in different positions
- Locations
- And much more information, so you can lead your company with data

# Operations

## Reporting

Bronto One's reporting helps to minimise risks. You can utilise Bronto One for various reports related to your equipment, quality, machine safety or personnel safety. Bronto One keeps all these reports in one place. You can create your own templates, e.g., an HSE reporting template.

## Inspections

To keep your equipment safe to use, it is important that each piece of equipment is inspected both when it arrives from the worksite and leaves for work. Inspection should also be documented following the manufacturer's instructions. Bronto One's easy inspection and reporting tools make it easy to track your equipment history. You can use ready-made templates or create your own inspection template following the equipment manufacturer's instructions.

## Manuals

Are you feeling lost with all the equipment manuals? Is your equipment in various locations?

Of course, you can find the latest operational and service manuals for your Brontos in the system, but you can also easily add your own manuals or any document for your equipment.

## Share your company news and information

Are your operators / service personnel distributed in various locations? Is it hard to share company information to each of them? Bronto One has built-in features to share news to your personnel.

# Operations add-ons

## Bronto One grows together with your business

You can extend Bronto One's capabilities with add-on services. Add new or extend existing services to create a package that works best for your business.

### Add-on: Resource management - ERP

Bronto One offers you complete ERP (Enterprise Resource Planning) features. You can manage your customers, orders, schedules, work sites, personnel and fleet in one place.

This enables you to combine resources as customer orders and schedules need. Keep your personnel and fleet data on an agile and precise timeline.

### Add-on: Pre-plan and store your work sites

**Work site information is one of the most valuable data assets owned by your company.** Good site planning before the work and storing of site information afterwards for future use saves your resources, time and money. Bronto One keeps all this information in one place.

Bronto One offers you digital tools, like BIM models of aerial platforms and Bronto Duties, for effective pre-planning without visiting a work site.

# Bronto Duties

## Add-on: Bronto Duties

Bronto One includes a version of Bronto Duties for simulating an aerial platform's reach next to buildings, built structures or wind turbines, for example. The generated view is in 3D and visualises the reach in practice to help in the planning of worksites and rescue operations. You can add the plan directly to the work site documentation.

# Maintenance

---

## Technical support

### **Preventive maintenance**

Following your preventive maintenance programs has never been easier, because Bronto One gives you access to your digital service and inspection history wherever you go. The service events and inspections are stored in Bronto One using the mobile application.

You can also read the latest Bronto service bulletins and get the latest service manuals from Bronto One.

### **Technical support**

If you encounter any issues with your equipment, don't worry – Bronto One gives you access to a knowledge base with solutions and guidance for hundreds of situations.

If you can't solve your problem with the information from the solution centre, you can submit a service request for our professionals directly from Bronto One.

# Remote access

## **Bronto One Remote access maintenance agreement**

Bronto One automatically collects operational data from your aerial platform, which is visualised in Bronto One. In case of an unexpected situation, an authorised Bronto technician can establish a remote service connection to the aerial and help your operator.

The technology of mobile networks is changing rapidly. 2G and 3G networks are closing, 4G and 5G are in operation, and the next generation of technology is already in the testing phase.

The Bronto One Remote access maintenance agreement ensures that your platform always has the latest remote access technology no matter what technological changes the future brings to mobile telephone networks.

# Training

---

## Simulator

### Training

Are you lost with your personnel's training?

In Bronto One you can manage all personnel training logs, certification and training materials. When organising new training events, you can easily bring the training offering available to all in your organisation or just to needed persons. And, of course, Bronto One reminds you if somebody's certification is expiring. Bronto One also offers fully digitalised self learning material, following the latest self-learning pedagogical principles, for easy and interactive studies. You can ask for an offer for training directly from Bronto One or inform your colleagues about internal training.

### Bronto One Simulator

Our training simulator offers risk-free, hands-on instruction in manoeuvring and controlling a virtual Bronto aerial platform on the road and in operations, including the complete Bronto+ control system and panels. You can find a report from each exercise in the operator's own training history. You can either lease or purchase your own simulator.

## **Bronto One Simulator maintenance agreement**

With this service, you always keep your Bronto simulator running and up to date. This service includes simulator software and city view updates. You will also get five new training exercises per year, from easy to very challenging. You can also purchase additional training packages.

**And there's  
more**

We develop the Bronto One service continuously based on customer feedback and requests.

**Let us know what you need!**

A man in a dark suit is shown in profile on the left side of the page, looking towards a large graphic on the right. The graphic consists of two overlapping hexagons: a magenta one on top and a light blue one on the bottom right. The text 'Get started' is written in white inside the light blue hexagon.

# Get started

## How to get started with Bronto One

1. Let's meet to discuss your needs
2. We'll suggest a tailored, modular Bronto One package for you
3. Together, we'll determine which Bronto One agreement is right for you
4. We'll help you get started
5. We suggest regular reviews to ensure your Bronto One package is aligned with your needs
