

Bronto One Connected

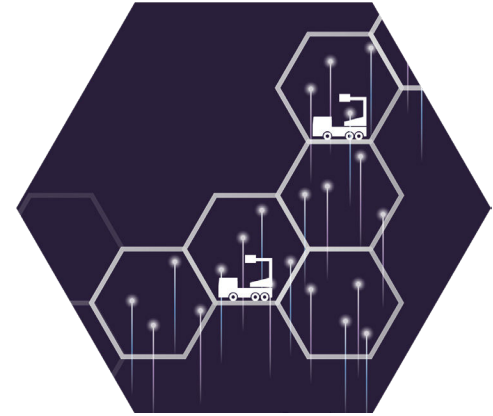

Bronto One Connected

Keep your Brontos connected

Rapid changes in network, data transfer and cyber security are taking place globally and proactive monitoring is needed to keep fleets connected and safe. Without connectivity, the benefits of rapid remote service and equipment data are lost.

Bronto One Connected is a proactive service that helps you minimize downtime and enhance safety by keeping you Brontos connected throughout these changes. With Bronto One Connected you can forget about technological & network changes as Bronto service team will monitor the global network situation and ensure your hardware and software are always up to date. Any broken hardware will be replaced with a new one.

Bronto One Connected allows you to always keep your Brontos ready for rapid remote service* and enable data & insights features. It also has automatic monitoring and protection against cyber threads and corruption, giving you extra level of safety and security.

Key features

- Secured connection through network changes
- Hardware and software always up to date
- Automatic monitoring and protection against cyber threads and corruption
- Broken hardware replacement

*Bronto One Connected does not include remote service fees. Connection is subject to network provider and coverage.

Safety above all
